

# St. Boniface Hospital New ED Project Construction Newsletter

JUNE 2023

ISSUE 13

This monthly newsletter provides insight into construction activities and updates on the progress of the New Emergency Department project.

## This month at a glance

During the month of May, a major milestone was achieved with the main floor structural slabs being completed. Structural steel installation continued, and the mechanical penthouse slabs were completed as well. Interior fit out is continuing into the high acuity zone and interior demolition in Y Block began.

## Upcoming Work

- EMS Garage slabs
- Air Handling Unit Install
- Structural steel installation
- Exterior Envelope Installation

## Fun Facts

The mechanical penthouse will house two air handling units used to circulate air within the New Emergency Department. These two air handling units are 44 feet in length and 18 feet in height. At full power, the fans in each unit can supply 3,060,000 cubic feet of air per hour. This is equivalent to inflating 5 commercial hot air balloons per hour.

## Progress Photos
